

Nitrile Gloves

Black Nitrile Powder-free *SafeTouch* Gloves

This product makes a great alternative to our Black Latex SafeTouch glove when allergies are a concern, but when you still need a product that won't show stains. Comfort, dexterity and flexibility are all great, and the puncture resistant material is particularly useful in areas of work where needles are involved, like tattoo parlours. The textured fingertips also help with tasks where grip and steadiness is paramount, while the fact that these gloves are powder-free means less risk of dust contamination. There's a beaded cuff for extra strength, and this also helps make it an easy glove to put on and take off.

These gloves are deliberately coloured black to suit messy jobs: jobs where it's important that stains aren't visible to customers. For example, if you're a tattooist or motor mechanic, you'll find these gloves are perfect for messy work where customers won't be impressed or reassured by the site of blood or oil. Of course, the dye in these gloves is fixed, so there's no risk of colour running from them.

- Available in blue, black and white
- Made using Nitrile Butadiene for excellent performance and flexibility and better puncture resistance than latex or vinyl
- Tear and chemical resistant and made in accordance with EN 455 1/2/3 and EN 374 1/2/3
- A popular choice with tattooists and motor factors where stains must remain invisible
- Medical graded examination gloves AQL – 1.5
- Food-grade product
- Powder free glove helps to reduce dust contamination

Our black nitrile glove is already a firm favourite in the following applications:

- Janitorial
- Tattoo parlours
- Motor Factors
- Domestic housework and gardening
- Painting and decorating
- Contamination control
