

Colour Coding System for Hygiene

The aim of a product colour coding system is to help prevent cross contamination during the cleaning process. It is vital that a system forms part of an employee training programme and day-to-day working routine. The colour coding of cleaning products is a simple but important step that will make a large contribution to hygiene standards and help with the elimination of cross infection. A proper colour coding system is also recommended for use by the HSE.

Key

- General food and bar use
- General low risk areas
- Sanitary fittings & washroom floors
- Wash basins & washroom surfaces
